Make me blink!

```
void setup() {
    pinMode(13, OUTPUT);
}
```

<- remember we do this once

hey arduino! use connector number 13 as a digital control!!

```
void loop() {
    digitalWrite(13, HIGH);
    delay(1000);
    digitalWrite(13, LOW);
    delay(1000);
}
```

turn it on (light up the light)

turn it off now

<- then we keep doing this forever
